

ABSTRACT OF THE INVENTION

AUTOMATED ENTITLEMENT VERIFICATION FOR
DELIVERY OF LICENSED SOFTWARE

A method, and computer readable medium for the central management, delivery and installation of media less software. The ordered software is packaged in such a way that only standard options are offered. The standard installation results in consistent software images across a corporation client PCs and eliminates the need of help desk involvement during installation. The software company is not involved with the burden of software distribution and tracking. Sales and the sales reports are generated and supplied in real time back to the software company.
